An International Forum in Computer Science . . .

Journal of Parallel and Distributed Computing

EDITORS-IN-CHIEF

Kai Hwang, *Department of Electrical Engineering and Computer Science, University of Southern California, Los Angeles*

Leonard Uhr, *Computer Sciences Department, University of Wisconsin, Madison*

This international journal is directed to researchers, engineers, educators, managers, programmers, and users of computers who have particular interests in parallel processing and/or distributed computing. The *Journal of Parallel and Distributed Computing* publishes original research papers and timely review articles on the theory, design, evaluation, and practices of parallel and/or distributed computing systems.

The journal provides an effective forum for communication among researchers from various scientific areas working in a wide variety of problem areas and sharing a fundamental common interest in improving the ability of computers to solve increasing numbers of difficult and complex problems as quickly and as efficiently as possible.

Research Areas Include

- Advances in computer technologies
- Algorithms for multiprocessors
- Algorithms for regular architectures
- Analysis of algorithms
- Arithmetic and vector processing
- Array processors and image analysis
- Compiling and program restructuring
- Complexity of parallel computation
- Computer networks and protocols
- Computer vision and pattern recognition
- Database machines and networks
- Dataflow computers
- Declarative parallel processing
- Distributed operating systems
- Distributed processing and AI computers
- Fault-tolerant multiprocessors
- Inference and knowledge machines
- Intelligent man–machine interfaces
- Interconnection networks
- Knowledge-based systems
- Mapping of parallel algorithms
- Mathematical software and supercomputers
- Multicomputers and programming
- Multiprocessor design issues
- Multipurpose parallel computers
- New generation of computers
- Numerical algebraic algorithms
- Optical computing
- Parallel programming languages
- Parallel logic programming
- Parallel numerical methods
- Parallel processing techniques
- Parallel scientific computations
- Parallelism in artificial intelligence
- Perception and robotics
- Performance of multiprocessors
- Pipelining and multiprocessing
- Planning and expert systems
- Shared memory multiprocessors
- Signal/image/speech processing
- Software for parallel computations
- Supercomputer applications
- Systolic/wavefront arrays
- VLSI/WSI computing systems
